HIGHLIGHTS

- ★ **Spotlight of the Month** — Briq
- ★ VP recognition for scaling automation & deployment efficiency
- ★ Published engineering author on **Medium** (WebSockets, systems)

EDUCATION

B.C.A — Computer Application

Gujarat · 2019

PROFILE

Automation Engineer / SDET with 7+ years designing and scaling test automation across **Web, Desktop, API, PDF and OCR** surfaces. Architected a **Java automation framework** powering 350+ production bots, led a **zero-downtime migration of 1,200+ scripts off JUnit** onto an in-house Reflection-based runner, and scaled test execution across **1,200+ Jenkins jobs**. Deep hands-on **Selenium, Playwright, Appium/WinAppDriver** and **RestAssured**, with **AI/LLM-driven test-data generation** wired into CI/CD — backed by enough engineering range (**Java, Spring/Hibernate, Python/Flask, Groovy**) to build the tooling my team tests with.

EXPERIENCE

Senior Automation Engineer Briq Data Analytics Pvt. Ltd.

Apr 2021 – Present

- Architected a **Java (Maven) automation framework** powering **350+ production bots** across **Web** (Selenium, Playwright), **Desktop** (Appium, WinAppDriver), **API** (RestAssured) and **OCR/PDF** (Sikuli, AWS Textract, Tesseract, Gemini Vertex) test surfaces.
- Led a **zero-downtime migration of 1,200+ automation scripts off JUnit** and built **BriqBotRunner**, a centralized test-execution engine using Java Reflection — cutting compile overhead and dramatically simplifying maintenance.
- Scaled CI/CD test infrastructure across **1,200+ Jenkins jobs** with **GitLab CI/CD**: maintained production pipelines, managed credentials, and validated every change on a **DR (disaster recovery)** instance before promoting to live.
- Built the **Groovy Shared Library** as the single entrypoint for every bot run — run/monitor/stop lifecycle, smarter failure recognition, Slack alerting, parameterized launches, and credential obfuscation.
- Automated third-party **ERP test coverage** for **Sage 300** and **Procore** using OCR-driven validation (Sikuli, AWS Textract) over RemoteApp sessions.
- Designed custom **LLM-based test agents** (Gemini via **Vertex AI**, GPT) to auto-generate machine-readable test data and to process and query construction drawing PDFs, expanding data-driven coverage.
- Built platform-independent **test evidence capture** — video recording and live streaming via **FFmpeg + Amazon IVS** — for web and desktop runs; praised by clients for debugging traceability.
- Engineered **Briq WebDriver** for secure **remote test execution and debugging** over WebSocket TCP tunnels, removing local tool installs and protecting client source code.
- Extended the Jenkins **Google Compute Engine** plugin for **ephemeral Windows test agents**: optional viewport setup and **JNLP** connect (vs SSH) so desktop automation gets a real interactive session.
- Owned test strategy with developers, PMs and SREs; reviewed peer merge requests, led knowledge-sharing sessions, and mentored the automation team.

Quality Assurance Analyst Oracle

Jul 2019 – Apr 2021

- Automated **Oracle HCM** product testing with the **OATS & KWiK** frameworks in Java — developed and maintained **200+ automation scripts** across Selenium and OpenScript.
- Triaged and resolved automation defects tracked in **ALM**, strengthening the reliability of the OATS-based test tooling.
- Built the **HCM Data Search Utility** end-to-end as full-stack developer — sub-4s search across 18,000+ test-data files via binary search and indexing, driving a **30% productivity boost** for the automation team.
- Revamped the **HCM Report Generator**, restructuring OpenScript HTML reports for faster load times and richer QA/debugging insight.
- Extended the **HCM KWiK recorder** with a video-capture capability for faster, more reliable test script creation.

KEY PROJECTS

BriqBotRunner Java · Reflection · Maven · Test Execution

Centralized **test-execution engine** using **dynamic class/method dispatch** to replace JUnit across **1,200+ test modules** — one entrypoint for running any suite on any platform, with consistent reporting and no per-module runner boilerplate.

Briq WebDriver Java · WebSockets · Selenium · FFmpeg

Secure **remote test execution & live debugging** over WebSocket TCP tunnels — runs Selenium sessions on client infrastructure with no local tool installs and no exposed source code. Extended with a microservice **video-evidence pipeline (FFmpeg + Amazon IVS)** for autonomous capture of every run.

Jenkins Shared Library Groovy · Jenkins · CI/CD · Test Orchestration

Central test-run entrypoint for **1,200+ Jenkins jobs**: run / monitor / stop lifecycle, improved failure recognition, Slack notifications, parameter passing, and credential obfuscation — with credentials managed and changes tested on a **DR instance** before production rollout.

Trading Platform (Personal) Java · Hibernate · Flask · React · PostgreSQL · LLM

(*personal*) End-to-end market-intelligence system I designed & built solo: a multi-module **Java/Hibernate** engine scraping & persisting institutional data to **PostgreSQL**; a **Flask** REST API with atomic, contract-driven endpoints; pandas technical-indicator & fundamentals scoring; an **agentic-AI research layer** (LLM) for stock analysis; and a React "Tactical Cockpit" dashboard plus a Chrome-extension broker overlay.
