HIGHLIGHTS

- ★ **Spotlight of the Month** — Briq
- ★ VP recognition for scaling automation & deployment efficiency
- ★ Published engineering author on **Medium** (WebSockets, systems)

EDUCATION

B.E. / B.Tech — Computer / IT
Gujarat · [Year — update]

PROFILE

Software Engineer with 7+ years building JVM platforms, internal developer tooling, and CI/CD systems that scale engineering throughput. Designed a **Java framework** powering 350+ production bots, a **Reflection-driven execution engine**, and **WebSocket-based** remote-execution tooling — and pioneered **agentic-AI/LLM** workflows that automate test-data generation and analysis. Comfortable across the stack — **Java, Spring/Hibernate, Python/Flask, Groovy, Jenkins** — with a track record of modernizing legacy systems and shipping measurable efficiency gains.

EXPERIENCE

Senior Software Engineer [Briq Data Analytics Pvt. Ltd.](#) Apr 2021 – Present

- Architected a **Java (Maven) automation & execution platform** powering **350+ production bots** across web, desktop, API, and OCR surfaces — standardizing config, execution, and reporting.
- Led a **zero-downtime migration of 1,200+ modules off JUnit** onto an in-house Reflection-based runner, cutting compile overhead and dramatically simplifying maintenance.
- Owned CI/CD at scale: **1,200+ Jenkins jobs** orchestrated via a custom **Groovy Shared Library** for cross-platform (Unix/Windows) pipelines on GitLab CI/CD.
- Designed custom **agentic-AI test agents** (GPT/Gemini-driven) embedded into automation workflows to auto-generate machine-readable test data, expanding data-driven coverage; drove design & merge-request reviews and team knowledge-sharing.

Software Engineer — QA & Tooling [Oracle](#)

Jul 2019 – Apr 2021

- Built the **HCM Data Search Utility** end-to-end as a full-stack developer, driving a **30% productivity boost** for the automation team.
- Revamped the **HCM Report Generator** — reduced report load time and shipped new reporting features.
- Developed and maintained **200+ Java automation scripts** (OATS/KWiK) and extended the KWiK recorder with a new capability for faster, more reliable script creation.

KEY PROJECTS

BriqBotRunner [Java](#) · [Reflection](#) · [Maven](#)

Centralized test-execution engine using **dynamic class/method dispatch** to replace JUnit across 1,200+ modules — a single entrypoint for running any bot on any platform.

Briq WebDriver [Java](#) · [WebSockets](#) · [TCP Tunneling](#)

Secure **remote execution & live debugging** over WebSocket TCP tunnels — removed local tool installs and protected client source code; also powers FFmpeg video evidence capture.

Jenkins Shared Library [Groovy](#) · [Jenkins](#) · [CI/CD](#)

Reusable, versioned pipeline components (build, test, deploy) shared across **1,200+ jobs** — standardizing cross-platform Unix/Windows execution and cutting boilerplate.

Trading Platform [Java](#) · [Hibernate](#) · [Flask](#) · [gRPC](#) · [React](#) · [PostgreSQL](#) · [LLM](#)

(*personal*) End-to-end market-intelligence system I designed & built solo: a multi-module **Java/Hibernate** engine scraping & persisting institutional data to **PostgreSQL**; a **Flask** REST API with atomic, contract-driven endpoints; a **gRPC** Java↔Python bridge; **pandas** technical-indicator & fundamentals scoring; an **agentic-AI research layer** (LLM) for stock analysis; and a React "Tactical Cockpit" dashboard plus a Chrome-extension broker overlay.
